

## Boom Lift Attachments

Boom Lift Attachment - Boom Lifts are a table lift mechanism which could be raised or lowered to differing heights, making this equipment a nifty tool for various industrial purposes. There are many unique varieties of Boom Lift consisting of knuckle booms, scissor lifts, and aerial lifts, each functioning in a different way.

Aerial platform lifts are most oftentimes utilized to carry people at ski lodges who are not comfortable using a ski lift. These lifts operate much like an elevator, snowboarders can be gradually shuffled up the mountain, stopping at stations along the route until they reach the top. Aerial platform lifts are also used in construction, moving people safely up and down the sides of multi-level construction sites.

Scissor hoists are quite frequently used by service providers as the best way to safely enable personnel to fix and work on cables and wires attached to poles. Telephone, cable and power corporations have relied on the effectiveness of this type of boom jack for years.

The knuckle boom jack is built for use within locations of rough ground and where the need to change direction may be required. This style of boom lift has the capability to fit in tight spots where a scissor lift cannot fit. Working between multiple equipment in a production facility or in close proximity between two walls, the knuckle boom additionally features a standard platform equipped with rails for security and employee safety.

The type of boom jack required by corporations will sometimes depend on the nature of the job required. Fortunately, there are suitable versions for practically any duty.
