

## Fork Positioner for Forklift

Forklift Fork Positioners - The fork positioner is actually a hydraulic apparatus which can allow the individual driving to work the forklift without leaving the seat. They are constructed out of high quality materials and are designed to withstand the most demanding procedures and work environments. Side shifting units have the added ability to laterally position the arms or the entire load so as to facilitate much more precise lifting and position in a quicker and more effective manner.

The only one of its kind fork pocket design could enable the one operating it to securely sway the unit's blades without any fear of damaging the positioning cylinders. This allows the operator the alternative to either perform independent or simultaneous blade movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages could be converted into fork positioners on existing units.
